

Machinery and equipment service

- Maintenance and repair
- Advice and implementation of modernizations, changeovers and upgrades
- Remote diagnosis and maintenance
- Machine repositioning
- Training courses
- Machine recycling

The experts of pro-beam offer the following services:

- **Maintenance and repair of electron beam and vacuum systems**

A regular preventive maintenance by our service technicians increases the availability of your system considerably. The risk of costly down times and sudden breakdowns is reduced to a minimum.

- **Modernizations, changeovers and upgrades**

Your electron beam system is not state-of-the-art any longer, but a continued use would be economically reasonable? Modernization and extension create the necessary prerequisites for this. Benefit from our wealth of experience!

- **Remote diagnosis and maintenance**

With this you are given a modern and affordable possibility to analyse the operating conditions of your system and to prepare the elimination of any possible breakdowns effectively. Furthermore, software adaptations can be performed in a quick and cost-effective manner.

- **Training courses, advisory service and further vocational training**

Being specialists in the field of electron beam and vacuum technology, we use our knowledge and experience especially to enable you to use and maintain your electron beam system effectively.

- **Repositioning of machines and systems**

Benefit from the competence and experience of our service team offering solutions for your tasks. As a service provider we also completely handle your repositioning projects.

- **Machine recycling**

Has the service time of your plant expired or has your field of production changed? We take care of your spare parts, assemblies or complete systems and recycle them in a professional and environmentally compatible way.

Benefit from our possibilities, we are expecting your call!
