

## Spare parts management

- **Separate emergency inventory**
- **Defined parts stock**
- **Secured access times**

The experts of pro-beam offer the following services:

- **Separate emergency inventory**

At our location we have a separate emergency inventory solely established for this purpose. Access to this inventory is reserved for our service technicians and contract customers particularly.

- **Defined parts stock**

Your production conditions and plant availability requirements are the basis of the parts stock held ready for you. We would be glad to assist you in defining a technically and economically reasonable spare and wear parts inventory.

- **Secured access time**

The regular collection of parcels at pro-beam Systems by a delivery service ensures the fast delivery of the ordered parts. Usually, delivery in Germany will be performed on the next working day. In very urgent cases we will organize express or courier delivery for you.

By the way

Our mechanical engineers have first-class contacts to all important manufacturers, finishers and system suppliers. Urgently needed parts that exceed the defined parts stock will be ordered for you as quickly as possible.

**Benefit from our possibilities and reduce your storage costs!**
